

## Loading instructions for the abrasive plant in Lünen

### Entrance and exit for lorries

Please register yourself as a driver at the terminals with your transport number. It is no longer necessary to go to the gatehouse. At the terminals, you will receive the following information and documents in **12 different languages** \*:

\* Languages: German, English, Spanish, Polish, Czech, Russian, Hungarian, Bulgarian, Turkish, French, Italian, Romanian

#### Entrance:

1. Selection of dialogue language by driver
2. Entry of transport number(s)
3. Presentation and confirmation of safety instructions
4. Entry of number plate details, driver name
5. Query of permissible total weight  
⇒ First weighing is done, loading list is printed and barrier opens automatically

#### Exit:

1. Selection of dialogue language by driver
2. Scanning of load list barcode or entry of transport number by driver  
⇒ Second weighing is done, presentation of order data
3. Termination of process, or confirmation with driver's signature  
⇒ Printout of delivery notes including signature, barrier opens automatically

#### Please note:

The automatic entrance barrier will only open upon entry of a **valid 6-digit transport number**. A retrospective issuance on-site or other opening of the barrier by our staff is not possible; this means that loading **cannot take place without a transport number**.

In addition, the exit barrier will only open under strict compliance with the **legally permissible total weight**. If this is not complied with, it is mandatory for the lorry to be unloaded on the plant premises.

If you have any questions or problems, our staff will be pleased to help you with remote maintenance in **German or English**. They can be reached via the communication buttons found at the terminals. However, please note that our employees cannot grant access to our plant premises without a valid transport number or adequate means of communication. For your safety, it is also important that you can understand the **simple safety instructions** from our on-site staff at the plant premises, **which are in German**.

### Many Thanks!
